

## Software for application design and construction

Based on many years' experience in the development of business and performance-demanding applications, SV Group provides its customers with services related to the evaluation/selection, education, implementation and use of tools for application design, modelling, construction, development and maintenance.

The primary goal is to select tools which will allow design, modelling and development of robust, performance-satisfactory, and Service Oriented Applications (SOA). These applications enable simple subsequent upgrading and maintenance.

Our services include consultations in the choice and evaluation of target tools, assistance and training in the use of tools, assistance in the implementation and integration of tools in existing developmental environments and teams, as well as assistance in communication and interaction with manufacturers of the selected tools.

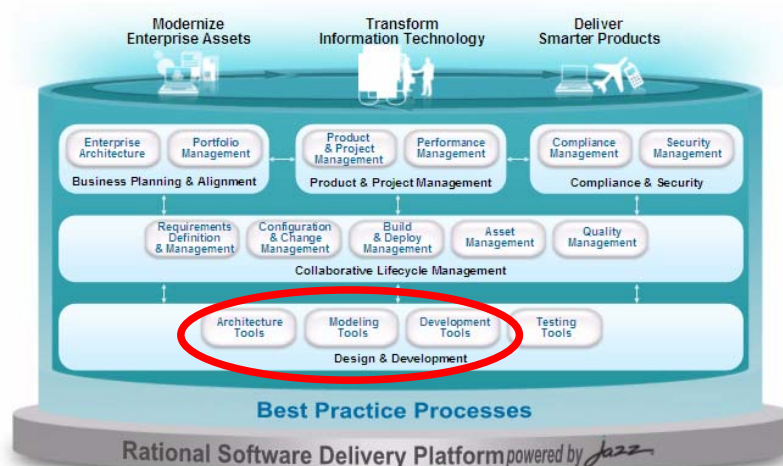

Certified SV Group employees are ready to join user development teams in order to help alleviate and accelerate the use of the selected tools and the development of target applications.

The above services can additionally be expanded and complemented with other SV Group application-related services, such as requirements specification, concept development, design, implementation, testing, installation and checkout, maintenance, project supervision, system services and others.

In the domain of development tools, SV Group focuses on IBM Rational Products.

Some of these include:

- Rational Application Developer for WebSphere Software
- Rational Business Developer
- Rational Developer for System z
- Rational Software Analyzer
- Rational Software Architect
- WebSphere Business Modeler
- WebSphere Lombardi Edition

Listed below are some of the key words from the world of application related to these services and tools: iJEE, J2EE, SOA, Portal, EGL, UML, Web servi, WebSphere, Eclipse, SysML, UPDM, java, C, C++
